Why VoIP

More and more companies are turning to collaborative business communication solutions to succeed in today's competitive and challenging business environment. While existing legacy phone systems might still function, there are increasing drawbacks, costs and risks of doing business using out-dated technology.

By implementing IP Telephony (VoIP) your organization can increase productivity, responsiveness and collaboration which is the key to competing in today's digital world. New technologies for communication and collaboration are highly network-intensive and require an infrastructure to support them.

VoIP Design & Installation

With over 30 years of expertise, Datanamics can design and enable your network for IP Telephony either as a complete installation or by integrating the application into your existing network.

- Business Planning
- Converged Network Design & Installation
- Hardware Selection & Procurement
- Project Planning & Management
- Vendor Integration
- Renovations, Upgrades & New Builds
- Certified Engineers

Converged Networks

The stringent demand of a voice application on any data network requires considerable expertise in this process. Datanamics' history of successful implementations across a range of network technologies brings that expertise to networks of any size or complexity.

- Cost Effective Voice & Data Integration
- Wired & Wireless - Secured & Open
- Public & Private Networks
- IT & Telecom Integration
- Security Compliance
- Systems Integration
